

Example Cybersecurity & Privacy Documentation

We are proud of the documentation that we produce for our clients and we encourage you to take a look at our example cybersecurity documentation. **Each product page has at least one PDF example** so that you can view the quality of ComplianceForge products for yourself - if you scroll down on the product pages you will find an "examples" section (generally located about 1/4 of the way down each product page).

Let us help you be successful! For many IT / cybersecurity / privacy professionals, when they refer to a "policy" they are really meaning a "standard" and that creates a great deal of confusion when discussing cybersecurity documentation, since those are not interchangeable terms. The most common questions we get pertain to "word crimes" that revolve around the misunderstanding what a policy, standard or procedure is meant to be, based on industry-recognized definitions. There are a lot of bad practices and we demonstrate what the words actually mean, so that everyone can operate from the same baseline understanding of the terminology, since in compliance, words have meanings and terminology matters.
